Events in AWT

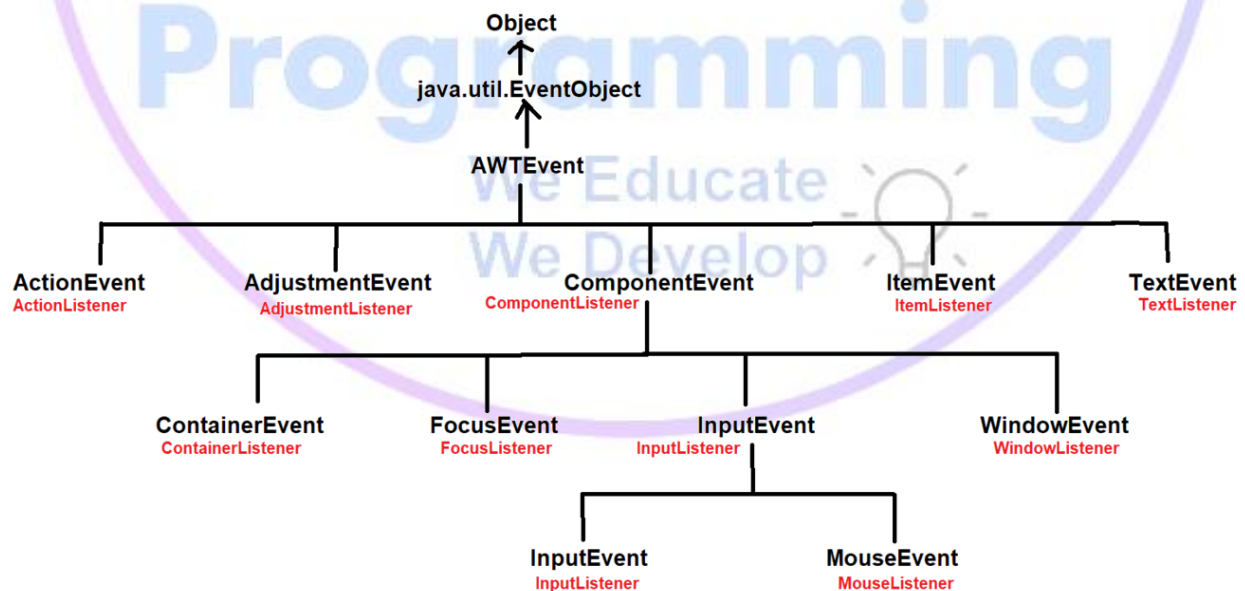

=> Event Handling :-

-> Changing the state of an object is known as event.

-> For example clicking on button, focus on textfield, mouse event on any component etc

-> To perform any event java provides an package i.e. java.awt.event

-> Hierarchy of Event Handling in AWT :-

-> NOTE : Whenever we have to perform any event on component then we have to register that component for event and for this java provide registration methods
