AWT & Swing in Java

GUI Part :-

-> GUI is Graphical User Interface

-> Java Provides following GUI Part :-

1. AWT (Abstract Window Toolkit)
2. Swing
3. Applet
4. javafx

=> AWT

-> AWT is an API used to develop Desktop Based or Window Based Application

-> AWT has a lot of disadvantages and due to this, Swing API was created on the basis of AWT

=> Swing :-

-> Swing is also a GUI part which is used to create Desktop Based Applications

=> Difference between AWT & Swing :-

1. AWT :- AWT provides heavy-weight components

Swing : Swing provides light-weight components

2. AWT : AWT is old framework

Swing : Swing is new framework

3. AWT : To use AWT we have to import java.awt package

Swing : To use Swing we have to import java.swing package

4. AWT : AWT provides less number of components

Swing : Swing provides more number of components

5. AWT : AWT is not portable

Swing : Swing is portable

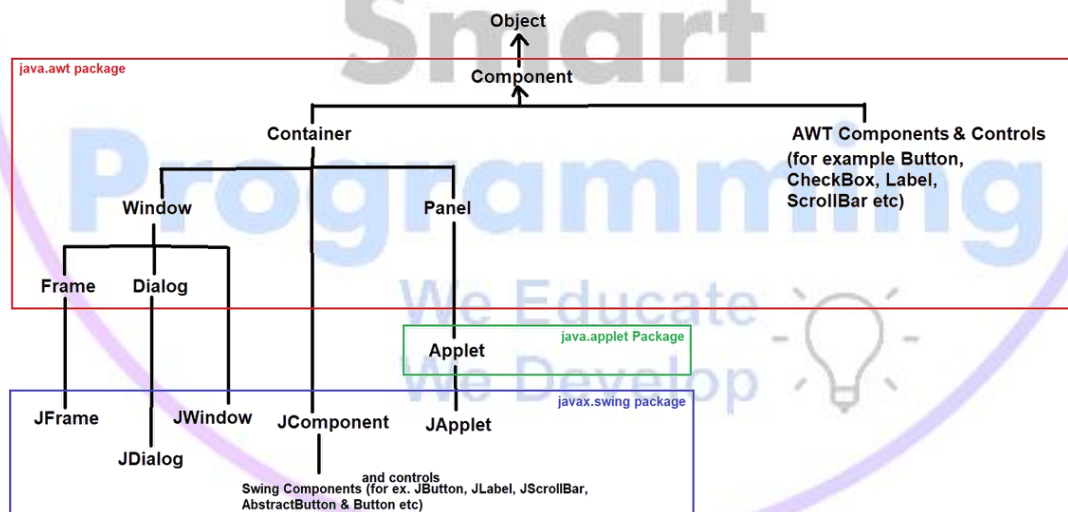

6. AWT : AWT requires more code for control functionalities

Swing : Swing requires less code for control functionalities

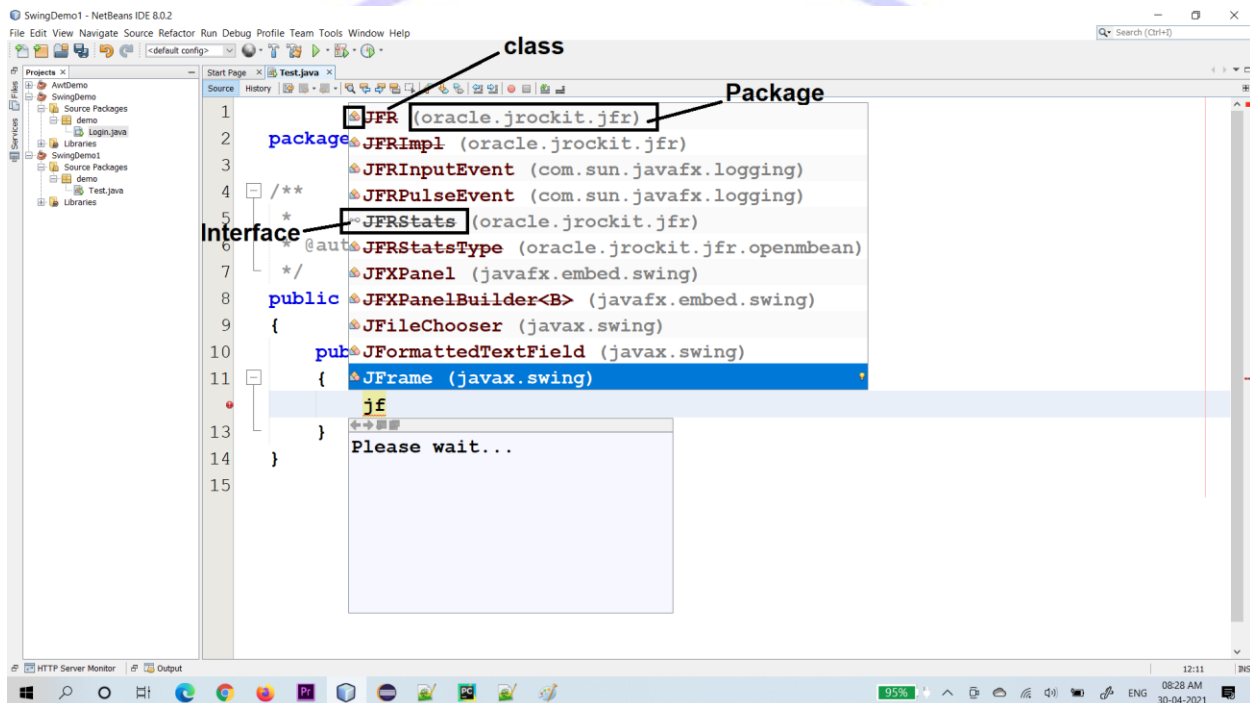

7. AWT : AWT does not support look and feel pluggable

Swing : Swing supports look and feel pluggable

=> Heirarchy of AWT & Swing :-
